

# TENTIPÍ® NORDIC TIPIS

ADVENTURE TENT CATALOGUE

EMBRACE THE ELEMENTS

[tentipi.com](https://tentipi.com)

# Tested in the Arctic for thousands of years

## The origin of the Nordic tipi

The Sami are the only indigenous people in Europe. The region historically inhabited by them, Sápmi, extends over northern Scandinavia and parts of Russia. They used to live as nomadic trackers, hunters and reindeer keepers. The traditional Sami tent, the forerunner of our Nordic tipis, has been the home of this people since the dawn of time as they followed their herds of reindeer over the vast, northern expanses of wilderness.

The tough climate, the long winter and nature's tribulations were part of these people's everyday life. They followed the lifecycle of their reindeer, accompanying them to their summer and winter grazing grounds. The focal point of their tents was the fire which gave them heat, light and a homely atmosphere.

Our company was started in Moskosel, a little village in Swedish Lapland, where the Sami heritage is ever present. Our hope is that, when you choose a Tentipi Nordic tipi, you will feel the same closeness to the elements as the indigenous people do.

## The Tentipi® story

The idea came to me when I was sitting by a stream, far out in the wilds of Swedish Lapland. Tired and sweaty after a long day of exciting canoeing, what I really wanted to do was socialise with my friends while eating dinner and chatting around a fire. But there were six of us sharing two tunnel tents, we were cooking outside and the mosquitoes were horrendous. There wasn't much cosiness nor relaxed togetherness on that occasion.

For a long time afterwards, I pondered over whether there couldn't be a different way of living in nature. What happened next is now 32 years of history. Inspired by the ancient knowledge of the indigenous Sami people, the journey towards a modern way of camping began. With life around the fire as its central theme, **Moskoselkåtan** was founded and in 2005, the name was changed to Tentipi.

As manufacturers of tents based on the type of dwelling used by the Sami, we created the international term "Nordic tipi" so that people in other parts of the world would get an idea of what our tents look like and how they function. But, as already mentioned, this kind of tent is not a new phenomenon. For thousands of years, indigenous peoples all over the world have used the method of stretching animal hides over wooden poles with a warming fire in the middle. What makes us proud is that we have managed to develop this type of accommodation into a reliable, modern and smart way of camping and it is continually being developed even more. A Tentipi Nordic tipi is so much more than just a tent. It's a wilderness home.

*Bengt Gustavsson*

Founder and CEO

# Why choose a Nordic tipi from Tentipi?

## Easy to pitch in only a few minutes

Measure out eight pegs in a circle, attach the tent canvas and then raise the central pole. With our standardised method, you can't go wrong.

## You can use a fire or stove inside

Whether you prefer an open fire or a stove, our Nordic tipis' unique design enables fire-making for warmth and cosiness. Increases safety in cold conditions.

## Outstanding ventilation

Keeps you comfortable whether you camp in the Arctic or under a blazing sun in the desert. Mosquito-netted openings let you ventilate out hot air and smoke without getting insects in the tent.

## Very stable in strong winds

The symmetrical shape and low central gravity make our Nordic tipis more secure in high and gusty winds than most other tent designs.

## Space for socialising and plenty of headroom

You can invite friends and family to join you around the fire. You can get dressed in the morning without crawling around on the floor.

## Comfortable, safe and highly versatile

## Outstanding materials

All our fabrics will keep you safe and dry in the elements and they all allow the use of an open fire or stove if you follow our fire safety instructions.

### Cotton/polyester

If weight is not a crucial factor, our cotton/polyester fabrics offer you a classic look and a pleasant indoor climate. This kind of fabric actually breathes out condensation while also keeping rain out.

### Lightweight

If you are hiking and want as little packing weight as possible, choose a lightweight tent. The polyamide fabrics are waterproof and you can add an inner tent which will protect you from condensation from the tent walls.

## Three quality grades

Most of Tentipi’s products are available in three different quality grades – Pro, Comfort and Base – to suit a variety of needs. Our design philosophy is about creating maximum value for money within each grade through a finely-balanced combination of materials and ingenious features.

### Pro

Top-quality materials. Extremely well-equipped with smart features.

### Comfort

High-quality materials. Well-equipped with smart features.

### Base

Good standard materials. Fewer features but still a very strong product with good functionality.

## Five sizes

Tentipi Adventure Nordic tipis are available in five sizes, from a snug two-man tent to a 15-man version which can accommodate the entire extended family.

The size you will require depends on your needs. The numbers attached to the product names are based on how many people can sleep in the tent in a military position. The comfortable sleeping number is less.

## Five models

### Safir™

Pro | Designed for the most extreme conditions. Also perfect for the active family. Safir has everything – rolled into one single tent – and we claim it is the world’s best Nordic tipi and most versatile tent.

### Zirkon™

Comfort | By Tentipi standards, this is medium class but in other contexts, it’s top class. A mobile home for people who want to invest in their outdoor living.

### Flex™

Pro and Comfort | A spacious tent that can be opened up partially or all the way around for a full panoramic effect. Available with the performance level of either Safir or Zirkon.

### Olivin™

Comfort | The most spacious and ingenious tent in the small peak tent category. For two people or for bushcrafting. Available in three variants – cotton/polyester, lightweight and Combi (lightweight tent with inner tent).

### Onyx™

Base | Intended for less ambitious purposes or when low weight is a priority, yet it has been used by mountaineers operating in the Pamir mountains next to the Himalayas.

# SAFIR™

## A versatile tent – for passionate outdoor lovers

Safir is used and loved by professionals in the most extreme conditions. This is a tent you can rely on 100 percent – on ice-fields and glaciers, in storm-force gales or blazing heat. Safir is perhaps the world’s most versatile tent – perfect for extreme expeditions, challenging trekking and a multitude of other outdoor activities. It’s been developed for people who need maximum performance and flexibility but its outstanding comfort and manageability make it a popular choice for families too. It’s perfect for family hikes, modern glamping or roadtrips. It’s everything – all in one.

We are continually investigating advanced materials and methods of manufacture all over the world. Quality – not price – is our driving force and we always choose materials on the basis of performance. That is why we can say that Safir is one of the very, very best tents available on the market.

Three large air intakes, each with a fitted mosquito net, are a standard feature. The door has a mosquito net and is fitted with extra toggles should there be an emergency. Our patented In-Tent Vent™ system allows you to adjust the ventilator cap, and thereby the temperature inside the tent, without even leaving your sleeping bag. The reinforced edging and other features are there to provide the best possible strength in those situations when tents often break. This increases the lifespan of your investment.

While relatively light in relation to size, durability is more important than lowest possible weight. Safir is lavishly designed with an abundance of user-friendly features and advanced performance. Standard equipped for extreme expeditions. This is for hard-core users and for people who need to be sure their tent will cope with almost all weather conditions and situations. Safir is for people who want the very best.

## Fabrics

**SAFIR cp – Cotpolmex Pro**  
Very strong and well-ventilating cotton/polyester fabric which gives an indoor climate far superior to that of a tent made of any kind of coated fabric. The beige-brown colour creates a warm, pleasant atmosphere in the Nordic tipi. The fabric is denser and more resistant to sunlight as regards strength and colour fastness than all corresponding fabrics tested. It has also better form stability and water repellency properties. With its high-class attributes, attractive appearance and natural feel, this is, as far as we know, the world’s best cotton/polyester outer tent fabric. Approximately 285 g/m².

**SAFIR light – Traillix Pro**  
Very strong, non-ventilating, green, lightweight fabric of high tenacity polyamide. The fabric is light, waterproof, ripstop reinforced, double-sided silicone-coated and UV-protected. We have allowed this fabric to be slightly heavier in order to make it even stronger. Approximately 80 g/m².

### Reinforcements

Reinforced edging along the bottom edge of the tent for better wear resistance. Exposed parts of the tent walls are strengthened with strain-relief reinforcements.

## Key features

- Versatile tent for maximum performance and flexibility
- Cotton/polyester fabric with very high fading resistance and very long life
- Three large, rain-protected, mosquito-netted air intakes at bottom edge of tent for optimal ventilation and smoke control
- Enhanced floor fitting with toggle and ring system; safety door-closure toggles in the unlikely event of zip breakage
- Ventilator cap: patented, advanced In-Tent Vent system; double piece with six opening points, controllable from inside the tent; integrated chimney opening; mosquito net in upper part; tighter seal thanks to fibreglass rods
- Mosquito-net ceiling for good ventilation and protection against mosquitos, even without an inner tent
- Storm cords with reflecting threads woven into the cords; pre-tied and fitted with holders
- Reinforced edging for better wear resistance along the bottom edge of the tent
- Many fastenings for attaching accessories and improved tensioning of the inner tent
- Patented, integrated accessory sleeve for a porch or canopy; on Safir 5–9
- General key features, see pages 4–7

**Accessories**  
Separate floor, inner tent with integrated floor, drying rail, stove, porch, canopy, etc. See pages 26–34.

# ZIRKON™

Zirkon 9 cp with fire box Hekla 30 that creates a warm and cozy atmosphere.

## Your living room in your backpack

Zirkon is medium-class in Tentipi’s world but top class in other contexts. Zirkon is a mobile home for people who want to invest in outdoor living and experience a new dimension of comfort and possibilities. The lightweight version is very popular because of its eye-catching yet earthly colour.

Zirkon is a combination of low weight, attractive price and international competitiveness regarding performance, since we focus on finding the best materials within this price range.

A large air intake with a net is standard. The door has mosquito protection and the patented In-Tent Vent™ system means it’s easy to ventilate out smoke and adjust the temperature. Zirkon has many of top-quality Safir’s features but has been designed for less extreme yet nevertheless demanding outdoor pursuits.

Zirkon is far better equipped than one would normally expect of a Nordic tipi or tent. For people with a wide range of outdoor interests and who appreciate good comfort and easy-to-use products for outdoor living. For people who place high demands on their equipment.

## Fabrics

**ZIRKON cp – Cotpolmex Comfort**  
Strong and well-ventilating cotton/polyester fabric which gives an indoor climate far superior to that of a tent made of any kind of coated fabric. The fabric has a natural feel and its beige-brown colour creates a warm, pleasant atmosphere in the Nordic tipi. Much more durable and with far better rain protection than one would expect from a cotton tent. Withstands the sun at least ten times better than lightweight fabrics (of any make). Fades rapidly in the sun but without being damaged to the same degree. Rot-protected. Approximately 275 g/m².

**ZIRKON light – Traillix Comfort**  
A carefully chosen and very good standard fabric. Non-ventilating, rusty red, light, ripstop-reinforced polyamide fabric, UV-protected and double-sided silicone-coated. Approximately 85 g/m².

**Reinforcements**  
Reinforced edging along the bottom edge of the tent for better wear resistance. Exposed parts of the tent walls are strengthened with strain-relief reinforcements.

## Key features

- One large, rain-protected, mosquito-netted air intake at bottom edge of tent for improved ventilation and smoke control
- Enhanced floor fitting with toggle and ring arrangement
- Ventilator cap: patented, advanced In-Tent Vent system; double piece with six opening points, controllable from inside the tent; integrated chimney opening; mosquito net in upper part; tighter seal thanks to fibreglass rods
- Mosquito-net ceiling for good ventilation and protection against mosquitos, even without an inner tent
- Storm cords with reflecting threads woven into the cords; pre-tied and fitted with holders
- Reinforced edging for better wear resistance along the bottom edge of the tent
- Many fastenings for attaching accessories and improved tensioning of the inner tent
- Patented, integrated accessory sleeve for a porch or canopy; on Zirkon 5–9
- General key features, see pages 4–7

**Accessories**  
Separate floor, inner tent with integrated floor, drying rail, stove, porch, canopy, etc. See pages 26–34.

Zirkonflex 15 cp with some of its walls raised. Fitted with a half inner tent for storage.

## Expanding the idea of a tent

A spacious tent that can be opened up partially or all the way around for full panorama effect. Used by nature guides as a communal room and by schools for outdoor education. Perfect for festive gatherings in your garden. Available with performance level of either Safir or Zirkon.

In strong winds, all walls are lowered and then the tent can withstand just about anything. Adjustable aluminium poles keep the raised walls up. With some of the walls raised, you get shelter from the wind but you still feel close to nature and you can see what is going on outside the tent. When all walls are raised, the covered area offers protection against the sun or rain.

## Fabrics

- SAFIRFLEX cp – Cotpolmex Pro**  
Very strong and well-ventilating cotton/polyester fabric. For more information, see page 11.
- ZIRKONFLEX cp – Cotpolmex Comfort**  
Strong and well-ventilating cotton/polyester fabric. For more information, see page 15.

## Key features

- With all walls lowered, Safirflex is like Safir 15 while Zirkonflex is like Zirkon 15
- Expansion panels that enable the walls of the tent to be raised
- Zips that hide the expansion panels when they are not being used
- Adjustable aluminium poles that keep the raised walls up
- The possibility of creating a 50 square metre covered area
- Information about Safir, see pages 8–11
- Information about Zirkon, see pages 12–15
- General key features, see pages 4–7

OLIVIN™

# Escape from everything – except comfort

Olivin 2 is big enough for two people to sleep or four people to sit and socialise and has enough space for storing equipment. Lightweight model at only 1.9 kilograms makes it the perfect hiking tent. The heavier cotton/polyester model is loved by bushcrafters because of the possibility of having a fire inside the tent and the earthy look of the fabric.

Our In-Tent Vent™ ventilation system together with the tent’s tall shape provide natural ventilation on hot days. The lower part of the walls can be rolled up and fastened for optimal ventilation (one option for cp, five for light). The shape of the tent makes it very storm-resistant.

## Olivin 2 cp

For those who want a small tent in a breathable material, we offer Olivin 2 cp made of a cotton/polyester blend. A small stove can be used inside the tent and a special ventilator cap with a chimney opening is included.

## Olivin 2 light

Olivin 2 light is a handy home for hikers. In an emergency, a small open fire can be lit inside the tent.

## Olivin 2 Combi light

This model is delivered with a detachable inner tent with

mosquito-netted ventilation openings. The outer and inner tents are pitched at the same time. Robust floor material stops ground damp, a common problem in lightweight tents. A fire cannot be used in this tent.

## Rain roof

The rain roof provides rain protection and shade in front of the entrance. It is attached to Olivin’s accessory sleeve.

## Inner tent and half inner tent

An inner tent is included with Olivin 2 Combi light but can be bought as an accessory for Olivin 2 cp and Olivin 2 light. A half inner tent is also available as an accessory. With an inner tent, you have more reliable protection against insects. The sturdy floor withstands ground dampness and therefore condensation is reduced too. An inner tent can also be used separately, for example, when insect protection is the main priority.

## Floor

The floor is designed to make it possible to remove or fold away the part nearest the door to avoid having dirty shoes or crumbs on the tent floor. It fits both Olivin cp and light and is made of a carefully chosen material that withstands ground dampness.

# Fabrics

## OLIVIN cp – Cotpolmex Comfort

Strong and well-ventilating cotton/polyester fabric which gives an indoor climate far superior to that of a tent made of any kind of coated fabric. The fabric has a natural feel and its beige-brown colour creates a warm, pleasant atmosphere in the Nordic tipi. Much more durable and with far better rain protection than one would expect from a cotton tent. Withstands the sun at least ten times better than lightweight fabrics (of any make). Fades rapidly in the sun but without being damaged to the same degree. Rot-protected. Approximately 275 g/m².

## OLIVIN light | OLIVIN COMBI light – Traillix Comfort

A carefully chosen and very good standard fabric. Rusty red, non-ventilating, light, ripstop-reinforced polyamide fabric, UV-protected and double-sided silicone-coated. Approximately 85 g/m².

# Key features

- Small but spacious and strong – for those who want a light load and appreciate the comfort of ample space
- Built-in snowflap that can be rolled up which makes the tent suitable for use in any season
- Ventilator cap: simplified In-Tent Vent system with two opening points, controllable from inside the tent
- Mosquito-net ceiling for good ventilation and protection against mosquitos
- Storm cords with reflecting threads woven into the cords; pre-tied and fitted with holders
- Patented, integrated accessory sleeve for a better-fitting rain roof
- General key features, see pages 4–7

## Reinforcements

Exposed parts of the tent walls are strengthened with strain-relief reinforcements.

ONYX™

ONYX™

Although Onyx 5 light is intended for less ambitious purposes, it is still the choice for Mike Fuchs' base camp at Lenin Peak, Pamir, 5,300 metres.

## For regular hiking or at 5,300 metres

Our intention with Onyx was a Nordic tipi for less ambitious purposes or when low weight is a priority. We managed to reduce the price considerably but our customers don't always think "less ambitious" – some use it in the most demanding circumstances.

By compromising a little on our stringent material requirements and by compensating with clever adjustments in the design, we have managed to create a reasonably-priced tent that is very durable and which we and our customers are very satisfied with.

One of the ways to reduce weight and price is to take away certain features. This we have done but without compromising on

quality. Onyx combines the best characteristics of an ordinary tent with the unique traits of a Nordic tipi. Moreover, it has a simplified version of the indoor ventilation adjustment system that is standard on our more expensive models.

Easy to handle, ample space, allows socialising around a cosy fire in the centre – this Nordic tipi is so much more than just a tent. The unexpected functionality and durability means that even our basic model of Onyx is a very advanced tent.

## Fabrics

**ONYX cp – Cotpolmex Comfort**  
Strong and well-ventilating cotton/polyester fabric which gives an indoor climate far superior to that of a tent made of any kind of coated fabric. The fabric has a natural feel and its beige-brown colour creates a warm, pleasant atmosphere in the Nordic tipi. Much more durable and with far better rain protection than one would expect from a cotton tent. Withstands the sun at least ten times better than lightweight fabrics (of any make). Fades rapidly in the sun but without being damaged to the same degree. Rot-protected. Approximately 275 g/m².

**ONYX light – Traillix Base**  
A carefully chosen standard fabric. Non-ventilating, grey, lightweight polyamide fabric, ripstop reinforced and PU-coated on one side. Rainproof even after long-term use. Approximately 80 g/m².

**Reinforcements**  
Exposed parts of the tent walls are strengthened with strain-relief reinforcements.

## Key features

- Solid, dependable performance – an affordable Nordic tipi and one you can rely on
- Ventilator cap: simplified In-Tent Vent system with two opening points, controllable from inside the tent
- Storm cords supplied loose
- Porch or canopy (accessories) can be attached with a separate accessory connector
- General key features, see pages 4–7

**Accessories**  
Separate floor, inner tent with integrated floor, drying rail, stove, porch, canopy, etc. See pages 26–34.

## Eldfell stove

With its ingenious design, efficient heat transmission, low weight and easy handling, Eldfell is the heart of the Nordic tipi and a faithful friend in cold and damp conditions.

Eldfell is designed so combustion takes place nearer the ground, creating more heat

inside the Nordic tipi, providing more effective heat for cooking and reducing wood consumption. Eldfell fits all Adventure tents from size 5 and larger, using the same stove body but different chimney lengths. The stove is made of stainless steel and comes in its own purpose-made wooden box. All technical features have been designed to fulfil

demands for low weight, good functioning and strength. The combustion chamber is spacious and about 50 centimetres long to take long, thick logs. The extendable insulation pipe protects the tent fabric even in strong winds. The spark arrester protects both the tent and the surrounding area. To prevent sinking when used in snow, the stove legs are notched for support poles.

## Hekla fire box

The Hekla fire box gives off little smoke but a lot of heat, which means it is easy to cook food on it or enjoy the heat and light from its open fire. It takes up very little space when packed. The fire box is indispensable if you are going to build a fire on snow. The metal rails under the box can be placed on branches or other support material on the snow, thereby preventing the fire box from sinking into the snow.

### Hekla 7

An alternative to a spirit stove set when hiking. Throws off a comfortable heat which, for our smaller Nordic tipis, is sufficient if the temperature is only a few degrees below zero.

### Hekla 30

Large enough for making big fires. Good for Nordic tipi size 7 and larger. When packed flat, it's so small and compact, it can be taken everywhere.

### Hekla fire box stand

Lawns, sensitive forestland or stone slabs are effectively protected from scorching, while on snow, the stand prevents the fire box from sinking because of the heat. It also prevents Hekla 30 from tipping over when the grate (accessory) is used as a protruding shelf for keeping food warm. The stand can also be used with Hekla 7. Any size of Hekla and a grate for Hekla 30 fit inside the stand after it has been folded down to a compact unit.

Tentipi's original accessories have been designed with the utmost care for optimal functionality with the Nordic tipis. We continually strive to develop the most requested accessories and also adapt them to earlier models of tents.

Half inner tent 9 divides Safir 9 cp into an area for socialising and a space for storage.

Safir 9 cp with Canopy 7/9 cp.

Zirkon 9 cp with Floor 9 Comfort and Hekla 7.

## Floors

Tentipi's whole floors are available in two grades – Pro and Comfort. Either grade of floor can be used with any of our tent models except Olivin. The zips make it possible to open the floor in different ways. A tensioning device fitted to the outer tent improves the seal between the floor and the tent walls, helping to keep insects out.

### Floor Pro

Floor Pro is made of light, strong, high tenacity polyamide fabric which is much stronger than standard fabrics. The floor has four zips which allow flexible opening possibilities.

### Floor Comfort

This floor is made of a carefully chosen standard-type material and has almost the same construction as Floor Pro (U-opening is not possible).

### Half floors

Tentipi's half floors are available in Comfort grade. If the Nordic tipi is used with a half inner tent, you can have a half floor on the rest of the living area. With no inner tent, a whole floor can be made by using Velcro to join two halves of ordinary material or half ordinary/half fleece. To make a fire in the tent, you can fold away the floor by opening the zip in the middle. The zip also makes it possible to remove quarter of the floor to create an uncovered space for dirty shoes, firewood, etc.

### Half floor Comfort

Half floor Comfort is made of a carefully chosen standard-type material. The zip makes it possible to open up the floor to make a fire or to use a quarter floor.

### Half fleece floor Comfort

This floor is made of a carefully chosen standard-type material where one side is covered with soft and comfortable fleece. It is fully damp-resistant, like all our other floors.

#### Key features

- Need not be detached when packing the tent; automatically in the correct position when the tent is pitched
- Fitted with a zip cover which protects the zip from dirt
- Flat and smartly stretched with the help of a tensioning device fitted to the outer tent

**O-opening:** Open from the centre and outwards. This allows you to brush off bread crumbs on the ground rather than on the floor. Also enables use of stove or open fire.

**A-opening:** Open from the centre and outwards but without opening the zip by the door. Allows crumbs to be brushed onto the ground while making more dry storage space by the door. Use A + O-opening for secure use of an open fire or stove.

**V-opening:** Open from the door. To avoid having dirty boots on the tent floor.

**U-opening:** A large opening from the door and round the central pole. For wood storage, open fire or to have ground contact. (Only Floor Pro).

Inner tents

Tentipi's inner tents, half inner tent and mesh inner tents are available in different grades. The whole inner tents can be used with any of our size 5, 7 and 9 tent models. Our half inner tent fits sizes 7, 9 and 15. Our Nordic tipis have been designed to function well even without an inner tent, although an inner tent does provide several advantages.

As for the ventilation on warm, sunny days when the mosquitos are in action, there is a closable insect net over the smoke opening that fits tight around the central pole.

The number of mosquito-netted air intakes in the different types of inner tents varies. Inner tent Base has no air intakes other than the mosquito-netted door which is a standard feature on all inner tent models.

Inner tent Pro

The walls are made of light, strong, high tenacity Teflon impregnated ripstop fabric which is much stronger than the material used in standard fabrics. Vertical zip, three

air intakes and a sewn-in Floor Pro with O-opening and V-opening.

Inner tent Comfort

The walls are made of a carefully chosen standard-type material. Vertical zip, three air intakes and a sewn-in Floor Comfort with O-opening and V-opening.

Inner tent Base

The walls are made of a carefully chosen, simpler standard-type material. Curved zip, no air intakes other than the door and a sewn-in floor without any zips. It is not possible to have a fire inside Inner tent Base.

Half inner tent Comfort

A half inner tent can be used to provide privacy inside the tent. For extra comfort inside the rest of the tent, it can be combined with a half floor or a half fleece floor. The walls are made of a carefully chosen standard-type material. Curved zip, two air intakes and a sewn-in floor of Comfort grade quality but without any zips.

Mesh inner tents Base

Our mesh inner tents give optimal insect protection and are also more airy than our ordinary inner tents. They are especially good together with a Nordic tipi of cotton/polyester where condensation is ventilated out through

the tent fabric. The walls are made of mesh. Curved zip, three openings for the whole and two for the half mesh inner tent and a sewn-in floor of Base grade quality, without any zips.

IT Solo pitching kit

The kit is used for pitching any of our inner tents on their own, that is, without a Nordic tipi. Practical in warm conditions but not rainproof or storm-resistant.

Inner tent key features

- More reliable protection against insects
- Less condensation caused by ground dampness because the floor covers the whole or part of the ground area of the tent
- More even distribution of heat – from a stove, for instance – when retained by double tent walls (does not apply for the half or the mesh inner tents)
- Protection against condensation, which is especially important for Nordic tipis made of lightweight material (does not apply for the mesh inner tents)
- Need not be detached when packing the tent; easily removed from the quick fastenings

Porch and canopies

Make your space by adding a rain- and sun-protected entrance. A porch or a canopy creates space for shoes and other items and enables dry entry into the tent.

A Tentipi Nordic tipi has astonishing storm resistance due to its symmetrical shape and heavy-duty construction. Therefore we have not made the porch or the canopy an integrated part of the tent but designed them to be easily attached and removed. This also makes it possible to reduce the weight. They are securely and neatly attached to our patented accessory sleeve (a holder for accessories, placed over the door) which is a standard feature on our tent models Safir and Zirkon (except size 15).

- Porch key features**
- Any rain water running from the top of the tent is led away from the entrance
  - Can be opened up completely to create a 180-degree view
  - Easily removed without taking down the tent, for example, if there is a risk of snow or bad weather

Onyx and size 15 Nordic tipis as well as Safir and Zirkon models before 2012 need an accessory connector to attach a porch or canopy.

- Canopy key features**
- Can be used separately and in different ways
  - Depending on the size of the canopy, either one or three telescopic poles are included
  - Rain-protected entrance creates more space
  - Easily removed without taking down the tent, for example, if there is a risk of snow or bad weather

Article number	12587	12588	12589	12593

## Rucksack frame

Our rucksack frame has been developed primarily for Safirflex/Zirkonflex but fits Safir 15/Zirkon 15 too. It is also perfect for any heavy loads, such as firewood. The frame is made of aluminium. It has an adjustable load-bearing system which distributes the weight. The padded hip belt gives good support and reduces strain

together with comfortable, padded shoulder straps. Because the rucksack frame can be adjusted in so many ways, it can be adapted to any build of body. It has many features such as the quick-lock buckles, the top straps, the chest strap and the ventilating back mesh panel.

Key features	
• Makes it easier to carry the larger Nordic tipis	
• Makes it easy to attach additional items/pack bags	
• Creates a ventilating air space between the back and the load	
• Also useful for fetching firewood	

Rucksack frame	
Weight (kg)	2.4

## Rain hat

The rain hat fits all sizes and models of tents except Olivin. It allows full ventilation on warm, rainy summer days while keeping rain out. It is placed over the tent top and attached to the storm cord fastenings.

Key features	
• Allows full ventilation even when it rains	
• Fitted easily over the top of the tent	
• Retains its taut shape with the help of a collapsible metal ring	

Rain hat	
Suitable for tent sizes	5-15
Weight (g)	580

Article number	12704

# Pegs and stakes

We have our own range of Tentipi designed pegs and stakes. Our lightweight Nordic tipis are supplied with lightweight pegs. The cotton/polyester Nordic tipis are supplied with our specially designed hard ground stakes as their main stakes.

## Lightweight pegs – Y-pegs and hook peg

The pegs which are a standard part of our lightweight tents combine low weight with maximum strength. They are designed so the ground strap can be hooked onto the peg after it has been pushed into the ground – great for pitching in a hurry. We combine three types of pegs (except for Olivin which has only one type) to optimise weight and function. These are manufactured specially for Tentipi with three quality grades. Our simplest Base

pegs are comparable to similar good quality pegs on the market. The level of performance and quality of our pegs in the Comfort and Pro grades are much higher, through the choice of materials and manufacturing techniques which include hardening.

“T6” is a treatment which increases the strength of the alloy, often more than twice as much. We apply this treatment to all three quality grades:

**Pro** – pegs, made of AL7001–T6, the strongest alloy available with extremely high breaking strength. Standard pegs of Safir light.

**Comfort** – pegs, made of AL7075-T6 (aircraft aluminium). Standard pegs of Zirkon light, Olivin cp and Olivin light.

**Base** – pegs, made of AL6061–T6, an alloy that is often chosen for its

combination of high strength and good price. Standard pegs of Onyx light.

Thanks to our unique design, Tentipi’s Y-pegs have about 25 per cent more flexural strength than other Y-pegs of the same material and weight.

## Hard ground stakes – steel stakes

Our hard ground stakes are made of hardenable steel (very rigid and strong). Each stake is forged from a single steel rod and has an unhardened stake body to retain toughness and a hardened tip. Grooves, machined along the stake body, further increase holding power.

## Snow and sand peg

Made of AL5251–H22, 1.6 mm.

# Wooden pole set

This is a development of great importance for those who run winter camps. Instead of a central pole, it’s possible to use a wooden pole frame in our Adventure Nordic tipis, with cross-poles just like in our Event tents.

Without the central pole, the interior will be more open. This makes it easier to furnish the Nordic tipi in different ways. The tent can cope better with the weight of snow (it is already storm-resistant) and can be left unattended more easily. The debarked wooden poles add ambience and an authentic feel. The pole set is recommended for use only in winter and is available in sizes 7, 9 and 15.

# Value for money

Why choose a Nordic tipi from Tentipi? We passionately strive to make the world’s most versatile tent, without any weak links when it comes to comfort, safety, strength and ventilation. This approach has brought us to our world-leading position. If you are looking for a tent that will give you most value for money, a Nordic tipi from Tentipi is the one for you.

## Socialising around the fire in a homely atmosphere

A Nordic tipi does not only provide shelter from the elements. Thanks to its unique design and comfort, it is more of a home when out camping, during summer as well as winter. You can make a fire for warmth and cosiness with ample space for socialising round it, giving togetherness, a sense of well-being, and protection from insects.

## Patented ventilation solution

Because of its shape and design solutions, the tent has excellent ventilation. Air enters at the bottom of the tent and exits through the large top opening where there is an adjustable cap, regulated from within the tent. It is the tent’s tall shape and special ventilation system that allow you to use an open fire or a stove inside the tent.

## Easy to pitch

Eight pegs, one pole and you are good to go. Tentipi Adventure tents have a central pole as a load-bearing shaft which makes it possible to pitch the tent in just a few minutes. Should the central pole be damaged, it can be easily replaced with a similar wooden pole.

## Optimal shape and stability

The height of the tent gives plenty of headroom, more space for activities, comfortable accommodation and efficient smoke

clearance. The symmetrical shape with a low centre of gravity keeps the Nordic tipi stable in strong winds.

## Outstanding materials and durable design

We offer top-quality tents where insightful material choices and reinforcements in exposed places provide good water repellency and high strength. Most of the tents have reinforced edging. Other reinforcements distribute strain, which increases the durability of the tent. Straps are used instead of cords to tension the Nordic tipi.

## Smarter use of space

By replacing several smaller tunnel tents with one Tentipi Nordic tipi, you gain lower weight per person, headroom to stand up straight, fire-making possibilities and a room to socialise in.

# Key features

**1. Mounting cross and measuring tape**  
Use a tent peg to pin down the mounting cross where the centre of the Nordic tipi is to be. Pull out the measuring tape and put a tent peg by the marking. Use the mounting cross and the measuring tape to position eight tent pegs in a circle.

**2. Central pole**  
Five-piece hardened aluminium alloy pole.

**3. Cap for central pole**  
Made of super-strong, durable braided bands.

**4. Tent fabric**  
Carefully selected fabric for the best price-performance ratio.

**5. Reinforced edging**  
Reinforcement, 50 centimetres high (not on Olivin or Onyx).

**6. Strain-relief for the tent walls**  
Top-quality reinforcements that distribute strain and increase the durability of the tent.

**FAQ, advice, hints and tips**  
[www.tentipi.com/support](http://www.tentipi.com/support)

**7. Ground straps**  
Strong, adjustable ground straps are used instead of cords to tension the Nordic tipi.

**8. Snow or sand**  
The ground strap shown here is ready for anchoring in snow or sand.

**9. Floor tensioners**  
For an attractive, smooth floor on uneven ground.

**10. Tent pegs**  
Several kinds depending on size of tent and material in order to optimise the weight-strength ratio. See page 34.

**17. Chimney opening**  
Versatile feature that allows the easy fitting of a stove (not on Olivin light, Olivin Combi light or Onyx).

**21. Large air intakes**  
Adjustable from inside the tent, each fitted with a mosquito net. Not on Olivin or Onyx but the lower part of Olivin's walls can be rolled up for better ventilation.

**11. Storm cord fastenings**  
Facilitate even distribution of strain on the tent walls. Firmly attached thanks to reinforced seams.

**12. Storm cord holders**  
Allow cords to be in place ready for use, without tangling (not on Onyx).

**13. Diagonal zip with rain flap**  
(Registered design.) Two features that prevent water penetration.

**14. Safety toggles**  
Enable door to be closed even if the zip has been damaged (Safir/Safirflex).

**15. Door fitted with mosquito net**  
Improves ventilation.

**16. Tent fabric - ventilation**  
Cotton/polyester: Good breathing properties ensure a pleasant indoor climate with minimum condensation.

**18. Smoke opening**  
Large smoke opening ensures efficient ventilation on warm days and smoke clearance when using a fire.

**19. Mosquito-net ceiling**  
Can be opened when using a fire (not on Onyx).

**20. Ventilator cap with In-Tent Vent™**  
Allows maximum control of the tent's indoor climate using patented technology. Olivin and Onyx have a somewhat simplified patented ventilation solution.

**22. Extra tightening feature**  
For extra tightening along the bottom edge of the Nordic tipi (not on Olivin or Onyx).

**23. Inner tent or floor**  
An inner tent or floor is available as an accessory.

**24. Accessory sleeve**  
Built-in feature (not on Onyx or size 15 tents but an adapter is available).

**25. Fastenings for accessories**  
Fully equipped for accessories such as inside pockets, drying rail, detachable floor and inner tent (only for floor and inner tent on Olivin).

**26. Compression bag**  
Unique design which compresses the bag using straps (not on Olivin or Onyx).

# Handcrafted Material

In many ways, a Nordic tipi, which is based on the Sami people's original dwellings, is the ideal tent. Its symmetrical cone-shape makes it very storm-resistant. It is spacious with standing height and perfect for socialising without being bothered by insects. It has great ventilation properties and you can even have an open fire inside the tent. Tentipi has modernised and optimised this concept for more than 30 years and has built up extensive expertise as regards finding and using the most appropriate materials and design solutions for its products.

## A great basic concept refined with passion and dedication

### Experience

Our Nordic tipis are made in three places, many miles apart. The first is in Moskosel, the Lapland village in northern Sweden where it all started. This is the location for much of the production expertise that has built up over the years. In Moskosel, we make large Nordic tipis for our Event range. Several of our seamstresses have been employed for many years which means they are highly skilled. This is a resource not only during the production of our tents but also for product development. It is in Moskosel that we preserve the soul of our Nordic tipis.

Our second production facility is in Sunne in central Sweden. Our product development unit, main office and warehouse are also located here.

The third place for our production is Qingdao in China where our Adventure range is sewn. Nowadays, most outdoor pursuit products are manufactured in Asia because of much lower costs. We too chose that route back in 2005 but the third-party tent-makers we contacted could not live up to our stringent requirements. Therefore, we set up our own tent factory which is fully owned by Tentipi. This has enabled us to improve the quality of our tents much more than we were able to do when our production was in Sweden. The fact is that now we can afford to invest many more hours in quality assurance than we could ever have done otherwise.

### Precision

To really ensure that our tents live up to what we promise, we have produced Tentipi's quality handbook. It is 7 centimetres thick and states with meticulous detail, down to the last stitch, how each feature is to be made. Every new sewing worker has to learn the parts of this book that are relevant for his or her job. The book is the result of more than 30 years of accumulated experience and is continually updated as new lessons are learnt. This explains in part why our tents remain standing when stormy weather destroys others.

### Ambition + insight + ability + will = best

There's a lot of talk about quality, about individual specifications or properties which are supposed to guarantee that a certain product is the best. We believe there are four important components which, when put together, make the final result something really special. These are: ambition, insight, ability and will.

Our ambition has never been primarily to haul in money. Instead, we have always endeavoured to make as functional a product as possible. The insight we have gained after all these years is that first and foremost you must identify existing problems and challenges which must be conquered. What is required of the material? Where are the biggest tension points on, for example, the tent canvas? How do we turn acquired knowledge into practical solutions that work? To really do this properly, a high level of ability and will is needed. Not until all four components – ambition, insight, ability and will – are in place, can the crucial step from good to best be taken.

### Tested

There are tests that look good on paper and there are tests that actually mean something. Tentipi does tests that reflect reality. For example, we never report the hydrostatic head values of our fabrics. This is quite simply because those values do not guarantee anything about the quality of a tent fabric. For example, a floor fabric, shown in the test to withstand a water column of 10,000 millimetres, may let so much water through that it's completely wet under the sleeping mat after one night. This is because of simple chemistry. Polyurethane, which is the most common coating on floor fabrics, lets water through in molecular form but not in liquid form. That's why the fabric gets high test values in the hydrostatic head test but it's still wet inside the tent. So it's quite easy for a very basic and cheap fabric to get a high hydrostatic head value.

That's why we do things the other way round when we test our fabrics. By measuring how much damp passes through the floor from wet ground, we can develop a tent that functions the way it should. Moreover, we carry out extensive rain tests in our specially designed rain room to ensure that the tents withstand water. If we detect any fault, we search until we find the problem and can rectify it.

We use more than 20 different tests when we choose a fabric for a product. We have designed several of these tests ourselves. About 20 per cent of our staff resources are dedicated for product development. Tentipi's tests are for real-life conditions.

### Tentipi

- Has more than 30 years of experience as the world-leading manufacturer of Nordic tipis
- Exposes its tents to extensive rain tests
- Has several patents and design rights for its original, ingenious design
- Views every Nordic tipi as a unique product and gives it a personal ID to make it possible to track its components and specific design
- Cares so deeply about its products that it only makes its Nordic tipis in its own fully-owned factories
- Cares about previous customers by making new features and requested accessories compatible with older models of tents whenever possible
- Prepares the tents for future developments by incorporating means of attaching new accessories if possible

# Great ambience, ingenious features

## ADVENTURE — meet nature

Home-from-home camping tents with ample space for socialising around a fire, plenty of headroom and outstanding ventilation.

## EVENT — enjoy the moment

Unique, spacious and flexible giant tents which create an exciting setting and a great ambience for inspiring events.

## GLAMPING — expect magic

High-end, elegant tents for glamorous camping with an airy and authentic atmosphere. Made of wooden poles and sustainable canvas.

## TENTIPI CIRCULAR — cherish the planet

Tentipi Circular is part of Tentipi's efforts to protect the environment. Our plan is to turn left-over manufacturing materials into new products.

Find out more about our full range of products at [tentipi.com](https://tentipi.com)

# We care about nature, people and our planet

"I needed to be by myself. I needed to think. I bought a second-hand tent and moved out to the forest. That became my home for four years."  
- Author and long-distance runner, Marcus Torgeby

## The best thing we can do for our planet is make long-lasting products

**We are driven by a passion to create first-class, genuine products and we want to do so in a way that is ethical and sustainable for both humans and nature. That is why we make products with a long lifespan – so durable that they can be passed on to the next generation.**

### Canvas built to last

We want our tents to last as long as they possibly can for the benefit of both our customers and the environment. To achieve this, we apply a long-term perspective to the production of our canvases by investing in high-quality, durable materials and smart design that increases the lifespan of the product. We also offer our customers a repair service.

### Tentipi Circular

Tentipi Circular is part of Tentipi's efforts to protect the environment. Over the years, we have been careful not to discard left-over, useable manufacturing materials and now, our plan is to use them for completely new Tentipi products.

It is not always best to own all your equipment yourself. If you are an infrequent user, it might be better to rent a tent from us or a Tentipi dealer with rental service.

### Fully-owned tent manufacturing business in China

With our fully-owned manufacturing plant in China, we have been able to intensify our development work and manufacture advanced products at acceptable prices. We have also been able to ensure that working conditions are good and that wages and working hours are reasonable. Our employees are picked up every morning by a hired driver and driven back after the end of the working day. A cooked lunch is included in the salary. The staff turnover is very low, 5–10 percent compared with 25 percent which is the normal figure for China. This must mean that our employees are happy with us.

### Giving back

Since we are active in the outdoor industry, we want to support organisations that work with environmental and nature issues. We support The Swedish Society for Nature Conservation and Vi Agroforestry. We also want to give back to the places where we operate, and therefore we support an SOS Children's Village in China.
